Surveys:
Encuesta Permanente de Hogares 1986, 1989
This survey is used by Psacharopoulos et al. (1997). The 1986 survey covers 4 cities and 12226 households whereas the 1989 survey covers 17 cities and 37864 households. The income concepts are earnings in 1986 and monetary disposable income in 1989. The monetary disposable income includes income from principal and secondary occupation, property, rents, pensions and other sources. The reference period is one month. The estimates are calculated from unit record data.

Encuesta Integrada de Hogares 1990, 1992, 1993, 1995, 1996, 1997
Székely (2003) uses 1990, 1993, 1995, 1996 and 1997; Gasparini (2003) uses 1992. Even if the survey is urban it covers around 90% of the population. The sample size for the 1992 survey is reported to be 28502. The reference period is one month and the income concept is apparently monetary disposable income.

Encuesta Nacional de Empleo 1996, 1997
This national survey is used by both Gasparini (2003) and Deininger & Squire (2004). The reference period is one month for the incomes. The income concept is apparently monetary income and includes at least in Deininger & Squire (2004) earnings, capital income, pensions, some social insurance items, remittances and other income.

Encuesta Continua de Hogares 1999, 2000
This survey is used by Deininger & Squire (2004), Gasparini (2003) and Székely (2003). Non-monetary income items, including imputed rent, are a part of the income concept. The reference period is one month for the incomes. In 2000, estimates based on consumption are also available. These are apparently based on response in one single interview. Purchased, self-consumed and given items are included. The respondent could choose the reference period for each food expenditure item. The food expenditures are asked with quite some detail, other expenditures with very little. Durables are asked about but it is not clear how they are treated.
