Growth and Development Policy: New Data, New Approaches, and New Evidence
30th November, 2016, Pretoria
Outline

- What is the Story?
- Why it Matters
- Objectives
- Methodology
- Findings
  - Determinants of Participation
  - Domestic and Trade Constraints
  - Barriers to Entry
- Policy Recommendations

“Working Towards the formulation of Sound Economic Policies”
Past 20 years have seen a sharp increase in the number of supermarkets chain stores across Zambia [Table 1]

- Traditionally - concentrated in the CBDs districts and prime shopping malls in major cities and urban towns [Picture 1]
- Recently spread into peri-urban low income areas which are more densely populated

Mainly spearheaded by South African supermarkets – Shoprite
Key Determinants of the Spread of Supermarkets

- Rising Income and middle class
- Changes in Food Consumption
- Urbanisation
- Liberalisation of the economy

"Working Towards the formulation of Sound Economic Policies"
Why it matters

1. Improved product and services availability
2. More consumer choice
3. Direct and indirect employment
4. Stimulus for agro processing/manufacturing and associated knock-on effects on:

   "Working Towards the formulation of Sound Economic Policies"
Access and full integration of local processing firms into SVC has the potential to improve the production capabilities of local industries.

Could serve as entry points into export markets.

- Allow for the acquisition and enhancement of technology and production techniques.
- Can increase industrial production, efficiency and achievement of economies of scale.
- Increase output and labour absorption, export and economic growth.

“Working Towards the formulation of Sound Economic Policies”
Growing Concern :-

- Participation of local suppliers in supermarket value chains remains limited (80% of processed goods imported from SA)

- This potentially deprives Zambia the opportunity to capitalise and harness the potential for industrial development from supermarket value chains

- Deprives the opportunity to access formal markets which are generally propagated to be superior to traditional markets
The manufacturing sector continues to hold unexploited potential for increased industrialisation and a broader export base.

More than half of Zambia’s exports across all the selected processed goods, *except for processed and preserved fruits and vegetables*, were exported to countries within the region.

DRC, Zimbabwe, Malawi and to a lesser extent, South Africa accounted for the greatest market share of Zambia’s exports of processed goods.

Spread of supermarkets and growing demand for processed foods and other household products in the region, present regional market opportunities for finished high value processed goods.

[Figure 1](#)
- Investigate the capabilities required to make local processing firms more competitive, and effectively integrate into SVC and regional markets

- Examines constraints hindering increased local firm participation in SVC
Mixed analysis of qualitative and quantitative data obtained from primary and secondary sources

Principal dataset obtained from survey of local processing firms augmented by KII of five major supermarket chain stores in Zambia.

Use the probit model to predict the likelihood that local processing firms will supply supermarkets based on a vector of observed exogenous variables (Table 2) as follows:

$$Pr (y = 1 \mid X) = \Phi (\beta_0 + \beta_1 X_1 + \ldots + \beta_k X_k)$$

$$Pr (\text{supply} = 1 \mid X) = \Phi (X\beta)$$
Findings...
Determinants of Participation

- Sample size = 99 obs
  - 48% - supermarket suppliers
  - 52% - non-suppliers
- Use maximum likelihood *probit model*
- Reduces number of observations to 74
- Results at $\alpha = 0.05$ (Figure 2):
  - Bar-coded Products
  - Investment in machinery

Statistically significant
Reasons for not supplying Supermarkets: the Non-Suppliers

- Low output volumes: 38% Yes, 62% No
- Cannot meet supermarket quality standards: 8% Yes, 92% No
- Lack of transport to take goods to supermarkets: 6% Yes, 94% No
- Long credit period: 46% Yes, 54% No
- Lack of finances to upgrade production techniques: 24% Yes, 76% No
- Other: 56% Yes, 44% No

“Working Towards the formulation of Sound Economic Policies”
Constraints facing local firms

Domestic and Trade Constraints Faced by Local Firms

- Load Shedding
- Access to Finance (66%)
- Cumbersome Border Procedures
- High Transportation Costs
- Language Barriers - Bribes
Firms’ Export Capabilities

- Canned products offer domestic firms most opportunities due to low local production
- Local production already exits for other products with potential for expanded local production
Structural Barriers to Entry
- Domestic regulatory standards – ZABS
- International regulatory standards – HACCP

Strategic Barriers to Entry
- Supermarkets’ Procurement Strategies
- Supermarkets’ Procurement Criteria
- Supermarket Supply Contract Conditions
- Competition from Vertical Integration of Supermarkets
Asymmetry in Perceptions of Firms’ capabilities

Supermarkets’ Procurement Criteria versus Firms’ Perceptions

Supermarkets' Perceptions of Firms' Competitiveness versus Firms' Perception of their Competitiveness

“Working Towards the formulation of Sound Economic Policies”
Competitive dynamics: Supermarkets versus Supermarkets

- Incumbent supermarkets tightened their price strategy and their marketing expenditure in response to the new competition.
- Mixed views regarding use of exclusive leases with shopping centres to curtail competition (Duration of existing exclusive lease - 5 years, previous leases longer -25 to 30 years but were no longer in effect due to CCPC Act which discourages exclusivity clauses.
- Notably, none of the supermarkets reported to have been denied access to a shopping mall as a result of an exclusive lease in place between a major incumbent supermarket and the shopping mall.
The spread of supermarkets in Zambia has the potential to confer greater benefits than the mere provision of various goods.

- Avenue through which industrial production can be stimulated by participation of local processing firms in their value chains.
- Potential to boost manufacturing growth in Zambia.

- Aid the broadening of Zambia’s export base to counter the risks associated with the dependence on metal commodities that are susceptible to international price shocks.
- Lead to knock on effects on employment creation that can offer citizens reprieve from poverty.

“Working Towards the formulation of Sound Economic Policies”
Policy Recommendations

- Establishment of a Supplier Development Fund (SDF)
- Local Content Policy
- Import Substitution
- Leveraging on Supermarkets’ Transport Systems for Exports
- Addressing Trade Barriers
- General Support to Local Firms from Supermarkets and Government
