Guatemala

Sources:

Surveys:  Encuesta Nacional Socio-Demografica 1987, 1989  The survey appears to have national coverage and includes 9660 households in 1987 and 10934 in 1989. The income concept includes monetary and non-monetary earnings, pensions and monetary and non-monetary subsidies, scholarships and transfers. Capital incomes and home production are not included. It is not clear why the mean values differ considerably between Psacharopoulos et al. (1997) and Deininger & Squire (2004).

Encuesta Nacional de Ingresos y Gastos Familiares (ENIGFAM) 1998  The survey covers 7139 households and was collected between March 1998 and March 1999. The income concept should be complete and cover incomes in-kind, home production and imputed rents. It is unclear how the consumption aggregate is constructed and what the coverage of the questionnaire is.

Encuesta Nacional sobre Condiciones de Vida 2000  The survey is national and includes labour and non-labour income. Non-monetary incomes are also included.

SEDLAC: The MECOVI program has promoted household surveys in Guatemala. The main household surveys is the
ENCovi (Encuesta Nacional de Condiciones de Vida) carried out in 2000 and 2006. The ENEI (Encuesta Nacional de Empleo e Ingresos) was carried out between 2002 and 2004. SEDLAC include statistics computed from both surveys.
