SEDLAC: Socio-Economic Database for Latin America and the Caribbean (CEDLAS and The World Bank)

Surveys:  Encuesta de Hogares, Mano de Obra 1983, 1990  This is a labour force survey covering the metropolitan areas only. In 1983, 5138 households were included and in 1990, 4791. The income concept is monetary income including income from earnings (also seasonal work), rents, interest, family help, pensions and other sources. Psacharopoulos et al. (19979 had access to unit record data.

Encuesta de Hogares 1995   Encuesta Integrada de Hogares 1997   Encuesta Permanente de Hogares 1999  Despite different naming the surveys seem to be similar. The income concept is monthly income and includes earnings in-cash and in-kind, rents, interests and dividends, family allowances, pensions, private transfers, other transfers and other income.

SEDLAC: Social variables in Paraguay can be traced at a national level only since 1995 with the microdata of the Encuesta de Hogares-Mano de Obra (EH-MO, 1995), the Encuesta Integrada de Hogares (EIH, 1997-1998 and 2000-2001) and the Encuesta Permanente de Hogares (EPH, 1999 and yearly since 2002). A historical perspective of the evolution of social indicators in Paraguay can be computed only for the Asunción Metropolitan area since 1983 with data from the Encuesta de Hogares-Mano de Obra.
