Zimbabwe Poverty Income Consumption and Expenditure Survey 2011/12 Report

Surveys:

Income, Consumption and Expenditure Survey 1990, 1995

    Documentation is scarce. The first survey included 15000 households. 15% of the households have missing incomes in 1995. Judging from the very high Gini coefficients in 1995, something appears to be wrong either in the survey or the aggregation.
